Hi Ben,

Here is the raptor observations exported from the new database and filtered for falcons. Sarah says that this should be close, but I am guessing that there's some fields missing that the model will be looking for.

I also sent you the export that she used from the 2019 database before the DB was completely overhauled. She says this one works, so at least we can use it to find out what the model script needs as inputs and should help you figure out what's missing from the new query at least.

Best,
Lizzy

Hi Ben,

I think she was keeping it locally as she was working remotely then. I would check in with her as I don't think it made it to the GOGA server.

Best,
Lizzy

Thanks for the github invite.

looks like Sarah was storing the data on her local machine.

```
wd<-
setwd("C:/Users/swakamiya/Documents/SFAN/Vital_Signs/Falcons/Analysis/R/GIT/Falcon_MultistateAnalysis"
)
```

should I ask her for the data or do you know its whereabouts?

thanks!

-Ben
